- GitHub: <https://github.com/Sanchochx>

EDUCATION

- B.Sc. in IT Engineering
- Universidad Santo Tomás
- Expected Graduation: 2026

CERTIFICATIONS

- 100 Days of Python (Udemy)
- Fullstack Web Development Bootcamp (Udemy)

LANGUAGES

- Spanish (Native)
- English (Bilingual proficiency)

PROFILE

IT Engineering student (Graduating 2026) with hands-on experience building fullstack applications using Angular, React, Node.js, Express, TypeScript, and Python. Solid background in RESTful APIs, relational and non-relational databases, and object-oriented programming.

Actively exploring agentic AI development, leveraging AI agents as productivity multipliers within my development workflow while maintaining architectural decision-making and code quality oversight.

Experienced in building secure, maintainable systems and AI-augmented applications. Bilingual in English and Spanish, with a strong commitment to continuous learning and delivering high-quality software.

TECHNICAL SKILLS

- Frontend: Angular, React, TypeScript, JavaScript, HTML, CSS
- Backend: Node.js, Express, Python, Flask
- Databases: SQL, MySQL, NoSQL
- Tools & Practices: Git, REST APIs, OOP, Authentication & Authorization, Agile
- Strong teamwork and collaboration
- Strong communication skills
- Effective problem-solving and adaptability

WORK EXPERIENCE

Full Stack Developer Intern

ESE Hospital Universitario San Rafael – Tunja, Colombia

Hybrid | October 2025 - May 2026

- Developed modular management systems using Angular and Node.js for administrative operations
- Implemented authentication and role-based access control for secure user management
- Designed responsive interfaces with Angular Material and integrated RESTful APIs
- Built reporting and data visualization features to support operational decision-making

Tech: Angular, TypeScript, RxJS, Node.js, Express, SQL / NoSQL, Git

PROJECTS

Secure Voting Management System

Full-stack web application focused on secure user and vote management.

- Developed RESTful backend with authentication and role-based access control using Flask and MySQL
- Built dynamic frontend with secure session handling and input validation
- Designed scalable architecture for controlled vote processing and audit logging

Tech: Python, Flask, MySQL, HTML, CSS

GesTrack - Basic ERP Management System

Full-stack web application designed to help businesses manage inventory, clients, and stock operations efficiently.

- Developed inventory management module for product tracking, stock adjustments, and real-time updates using WebSockets
- Implemented customer administration system with role-based access control (Admin, Warehouse Manager, Sales Staff)
- Built reporting features to generate inventory valuation reports and support business decision-making
- Designed RESTful APIs with secure JWT authentication and scalable backend architecture

Tech: Python, Flask, React 19, PostgreSQL, SQLAlchemy, JWT, REST APIs, Vite

Enterprise Web Development Industrial landing page with dynamic catalog

Professional website for Hidrosoldaduras ACH SAS, a leading company in industrial hydraulic solutions with presence in 30 cities nationwide.

- Developed an industrial landing page consistent with the company's visual identity.
- Implemented route-based navigation, reusable standalone components, and progressive entry animations for a smooth user experience.
- Applied an agile and incremental development workflow based on user stories with acceptance criteria defined per epic.

Technologies: Angular 17+, TypeScript, SCSS, AOS, Angular Animations, Git
