PORTFOLIO & LINKS

- Website: https://sanchodevportfolio.vercel.app
- GitHub: https://github.com/Sanchochx

EDUCATION

- B.S. in Systems Engineering | Universidad Santo Tomás | 2021 - 2026

CERTIFICATIONS

- 100 Days of Code: The Complete Python Pro Bootcamp
- The Ultimate Fullstack Web Development Bootcamp
- AI Engineer Agentic Track: The Complete Agent & MCP Course

LANGUAGES

- Spanish (Native)
- English (C1 Level EF SET Certificate)

PROFILE

Software Engineer with Full-Stack development experience and a hands-on approach to DevOps culture and Cloud-Native architectures.

Capable of designing, programming, and orchestrating secure applications, managing the complete software lifecycle through to containerized deployment in Linux environments.

I integrate Artificial Intelligence (including agent-based architectures) to maximize workflow productivity, ensuring code quality, the integrity of architectural decisions, and infrastructure standardization.

Bilingual (English and Spanish), with a strong focus on problem-solving, continuous learning, and delivering high-value software.

TECHNICAL SKILLS

- Frontend: Angular, React, TypeScript, JavaScript, HTML, CSS, Astro, Vite.
- Backend: Node.js, Express, Python, Flask.
- Databases: MySQL, NoSQL, SQL
- Infrastructure & DevOps: Docker, Docker Compose, Linux, Containerization.
- Development & Tools: RESTful APIs, Git, Agile methodologies.
- AI: Software development with AI, Agentic AI, LangChain, LangGraph, MCP Servers.

WORK EXPERIENCE

Freelance Full-Stack Developer
May 2026 - Present
- I develop end-to-end web solutions for independent clients, prioritizing clean architectures and responsive design to drive measurable business impact, while accelerating delivery times through AI-assisted workflows without compromising code quality.

Full Stack Developer Intern
ESE Hospital Universitario San Rafael – Colombia
Hybrid | October 2025 - May 2026
- Developed modular full-stack systems using Angular and Node.js to optimize administrative workflows, integrating responsive interfaces, RESTful APIs, and secure role-based access control. Additionally, I implemented reporting and data visualization modules to support and streamline operational decision-making.

PROJECTS

Secure Voting Management System
- Designed and developed a scalable voting system with audit logging, integrating a secure RESTful backend (Flask and MySQL) with role-based access control, and a dynamic frontend focused on input validation and secure session handling.

GesTrack - Basic ERP Management System
- Developed real-time customer and inventory management modules, backed by a secure RESTful API with JWT authentication and role-based access control tailored to different operational profiles (administration, warehouse, and sales).
- Migrated the system architecture to a Cloud-Native model, containerizing Frontend (Vite/Node.js) and Backend (Flask) microservices using Docker and Docker Compose.
- Standardized the deployment environment on Linux (Ubuntu), implementing isolated internal networks and Docker Volumes (Bind Mounts) to ensure database persistence and enable real-time code updates (hot-reloading).

Website for Hidrosoldaduras ACH SAS – Industrial Landing Page & Catalog
- Developed a responsive industrial website featuring a dynamic catalog using Angular and TypeScript, integrating reusable standalone components, route-based navigation, and animations. The project lifecycle was managed using Agile methodologies, ensuring quality delivery through user stories and acceptance criteria.
